This book sheds new light on the management of patients

with borderline cardiovascular risk factors in order to prevent their progression to end organ damage. The book stimulates discussion of this poorly understood condition and lays the groundwork for developing recommendations and guidelines. While the diagnostic and therapeutic approach to full-blown diabetes, hypertension, dyslipidemia and obesity is well defined, there is still a lack of clear understanding and guidelines as far as patients with borderline conditions - especially when multiple - are concerned. Moreover, end-organ damage depends on several factors, including genetic factors, making it

difficult to predict its extent. As such, the gradual transition from a healthy subject to one with functional hemodynamic changes, and then one with structurally asymptomatic changes and lastly to overt disease needs further investigation. In order to address these knowledge gaps, the book covers a broad variety of topics, making it a valuable tool for identifying which asymptomatic subjects could profit from being appropriately screened and at what stage. Furthermore it offers insights into better treating these patients to prevent their progression to overt disease. The book appeals to cardiologists, primary care

physicians and all those healthcare professional looking to optimize the management of these complex and often undiagnosed cases. This edited volume is a compilation of 30 articles discussing what constitutes food for health and longevity. The aim is to provide up-to-date information, insights, and future tendencies in the ongoing scientific research about nutritional components, food habits and dietary patterns in different cultures. The health-sustaining and health-promoting effects of food are certainly founded in its overall composition of macronutrients and micronutrients. However, the consumption of these nutrients

is normally in the form of raw or prepared food from the animal and plant sources. The book is divided into four parts and a conclusion, and successfully conveys the well-established information and knowledge, along with the personal views of a diversified group of researchers and academicians on the multifaceted aspects of nutrition, food and diet. The first part reviews the scientific information about proteins, carbohydrates, fats and oils, micronutrients, pro- and pre-biotics, and hormetins, along with a discussion of the evolutionary principles and constraints about what is optimal food, if any. The second

part discusses various kinds of foods and food supplements with respect to their claimed benefits for general health and prevention of some diseases. The third part brings in the cultural aspects, such as what are the principles of healthy eating according to the traditional Chinese and Indian systems, what is the importance of meal times and daily rhythms, and how different cultures have developed different folk wisdoms for eating for health, longevity and immortality. In the part four, various approaches which are either already in practice or are still in the testing and research phases are discussed and

evaluated critically, for example intermittent fasting and calorie restriction, food-based short peptides, senolytics, Ayurvedic compounds, optimal food for old people, and food for the prevention of obesity and other metabolic disorders. The overarching aim of this book is to inform, inspire and encourage students, researchers, educators and medical health professionals thinking about food and food habits in a holistic context of our habits, cultures and patterns. Food cannot be reduced to a pill of nutritional components. Eating food is a complex human behavior culturally evolved over

thousands of years. Perhaps the old adage “we are what we eat” needs to be modified to “we eat what we are”. This book discusses the socioeconomic effects of Right-to-Work (RTW) laws on state populations. RTW laws forbid requiring union membership even at union-represented worksites. The core of the 22 long-term RTW states was the Confederacy, cultural descendants of rigidly hierarchical agrarian feudal England. RTW laws buttress hierarchy and power imbalance which unions minimize at the worksite and by encouraging higher educational attainment, social mobility, and individual empowerment through group

validation. Contrary to claims of RTW proponents, RTW and non-RTW states do not differ significantly in unemployment rates. RTW states have higher poverty rates, lower median household incomes, and lower educational attainment on average and median than non-RTW states. RTW states on average and median have lower life expectancy, higher obesity prevalence, and higher rates of all-cause mortality, early mortality from chronic conditions, child mortality, and risk behaviors than non-RTW states. The higher mortality rates result in startlingly higher annual numbers of years of life lost before age 75. Stroke mortality at age 55-64

in RTW states results in nearly 10,000 years annually lost in excess of what it would be if the mortality rate were that of non-RTW states. A review of respected publications describes the physiological mechanisms and epidemiology of accelerated aging due to socioeconomic stress. Unions challenge hierarchy directly at work-sites and indirectly through encouraging college education, social mobility, and community and political engagement. How startling that feudal hierarchy lives in 21st century America, shaping vast differences between states in macro- and micro-economics, educational attainment, innovation, life expectancy,

obesity prevalence, chronic disease mortality, infant and child mortality, risk behaviors, and other public health markers! Readers will gain insight about the coming clash between feudal individualism and adaptive collectivism, and, in the last chapter, on ways to win the clash by “missionary” work for collectivism. Medical Epigenetics, Second Edition provides a comprehensive analysis of epigenetics in health management, across a broad spectrum of disease categories and specialties, and with a focus on human systems, epigenetic diseases that affect these systems, and evolving modes of epigenetic-based treatment. Here, more than 40

leading researchers examine how each human system is affected by epigenetic maladies, offering an all-in-one resource on medical epigenetics not only for those directly involved with health care, but investigators in life sciences, biotech companies, graduate students, and others who are interested in applied aspects of epigenetics. Incorporating both diagnostic and prognostic epigenetic approaches, this volume also fully supports the application of epigenetics in precision medicine. This second edition of Medical Epigenetics, a volume in the Translational Epigenetics series, has been fully revised to address recent

advances in disease epigenetics and role of epigenetics in precision medicine, with all-new chapters on skin cancer epigenetics, network analysis in medical epigenetics, machine learning in epigenetic diseases, and clinical trials of epigenetics drugs. Features chapters from leading researchers and clinicians dedicated to the burgeoning role of epigenetics in medical practice Covers emerging topics, including twin epigenetics, as well as epigenetics of gastrointestinal disease, muscle disorders, endocrine disorders, ocular medicine, pediatric diseases, sports medicine, noncoding RNA therapeutics, pain

management and regenerative medicine Organized from system disorders to multi-system disorders that involve epigenetic aberrations Examines the role of epigenetics in precision medicine Explore the current state of the production, processing, and manufacturing industries and discover what it will take to achieve re-industrialization of the former industrial powerhouses that can counterbalance the benefits of cheap labor providers dominating the industrial sector. This book explores the potential for the Internet of Things (IoT), Big Data, Cyber-Physical Systems (CPS), and Smart Factory

technologies to replace the still largely mechanical, people-based systems of offshore locations. Industry 4.0: The Industrial Internet of Things covers Industry 4.0, a term that encapsulates trends and technologies that could rewrite the rules of manufacturing and production. What You'll Learn: Discover the Industrial Internet and Industrial Internet of Things See the technologies that must advance to enable Industry 4.0 and learn what is happening today to make that happen Observe examples of the implementation of Industry 4.0 Apply some of these case studies Discover the potential to take back the lead in manufacturing, and the

potential fallout that could result Who This Book is For: Business futurists, business strategists, CEOs and CTOs, and anyone with an interest and an IT or business background; or anyone who may have a keen interest in how the future of IT, industry and production will develop over the next two decades. This unique book provides a critical examination of the current traditions and techniques commonly taught regarding hallux valgus correction and contrasts them with new, evidence-based anatomic and surgical concepts that change the entire approach to bunion surgery. Beginning with the history, etiology and

epidemiology of the deformity, its clinical implications and physical and radiological assessment are then discussed. An overview of surgical correction strategies is then presented, followed by detailed chapters on the techniques themselves, covering rationale for the approach, anatomic and technical considerations, post-operative management and evidence-based outcomes. Surgical techniques include phalangeal, crescentic and distal metatarsal osteotomies, the scarf and rotational scarf procedure, joint arthrodesis and arthroplasty, among others. The evaluation and management of the hallux valgus deformity has changed

very little over the past several decades despite much discussion, debate, research and new technology. Now, utilizing the most up-to-date evidence and presenting multiple treatment strategies, Evidence-Based Bunion Surgery will be the new standard for the management of hallux valgus for podiatric and orthopedic surgeons, residents and fellows. AACN Core Curriculum for Pediatric High Acuity, Progressive, and Critical Care, Third Edition, provides content required to deliver the best care for critically ill or injured children. As acuity increases in all inpatient departments and the practice of pediatric critical

care expands beyond the acute phase of illness or injury, knowledge of pediatric critical care is more essential than ever. Pediatric acute and critical care nurses find themselves handling not only their patients, but care of their families and management of an interprofessional team of caregivers. With emphasis on evidence-based care and professionalism, this essential resource captures the professional role of the pediatric critical care nurse and the nurse's contributions to the process of continuous quality improvement. Ideal for pediatric critical care and acute care nurses, high acuity/critical care courses,

and continuing education, AACN Core Curriculum for Pediatric High Acuity, Progressive, and Critical Care, Third Edition, contains core AACN guidelines for the highest quality nursing practice. The text covers anatomic, physiologic, cognitive, and psychosocial changes that occur throughout the pediatric lifespan. Chapters are systems focused and review developmental anatomy and physiology, clinical assessment, pharmacology, diagnostic tests, and therapeutic procedures. For each type of disease and injury, information is provided on pathophysiology, etiology, risk factors, signs and symptoms, nursing and

collaborative interprofessional management, and complications. New to the Third Edition: Updated to include current patient management and the latest pediatric drug information Contains a completely new chapter on professional nursing issues, including quality, safety, communications, teamwork, work environment, and personal wellness Provides revised case studies and review questions/answers reflecting the latest version of the CCRN® Pediatric exam Key Features: Delivers comprehensive, current information for nursing students and those preparing for the CCRN® Pediatric exam

Content is based on the most current standards of care, scope of practice, national guidelines, key AACN initiatives, and the AACN Certification Corporation Pediatric CCRN® Test Plan Presented in easy-to-read outline format for quick access to information Written and endorsed by AACN and AACN-affiliated subject matter experts Provides case studies to illustrate patient scenarios Discusses the application of AACN's Synergy Model for Patient Care in pediatric high acuity and critical care nursing practice Includes in-depth coverage of multisystem problems such as multiple trauma, toxicology, septic

shock, and burns. Imagine what Atari might have achieved if Steve Jobs had stayed there to develop the first massmarket personal computer. Or what Steve Case might have done for PepsiCo if he hadn't left for a gaming start-up that eventually became AOL. What if Salomon Brothers had kept Michael Bloomberg, or Bear Stearns had exploited the inventive ideas of Stephen Ross? Scores of top-tier entrepreneurs worked for established corporations before they struck out on their own and became self-made billionaires. People like Mark Cuban, John Paul DeJoria, Sara Blakely, and T. Boone Pickens all built businesses—in some cases,

multiple businesses—that are among today's most iconic brands. This fact raises two profound questions: Why couldn't their former employers hang on to these extraordinarily talented people? And why are most big companies unable to create as much new value as the world's roughly 800 self-made billionaires? John Sviokla and Mitch Cohen decided to look more closely at self-made billionaires because creating \$1 billion or more in value is an incredible feat. Drawing on extensive research and interviews, the authors concluded that many of the myths perpetuated about billionaires are simply not true.

These billionaires aren't necessarily smarter, harder working, or luckier than their peers. They aren't all prodigies, crossing the billionaire finish line in their twenties. Nor, most of the time, do they create something brand-new: More than 80 percent of the billionaires in the research sample earned their billions in highly competitive industries. The key difference is what the authors call the "Producer" mind-set, in contrast with the far more pervasive "Performer" mind-set. Performers strive to excel in well-defined areas, and are important. But Producers are critical to any company looking to create massive value because they redefine what's

possible, rather than simply meeting preexisting goals and standards. Combining sound judgment with imaginative vision, Producers think up entirely new products, services, strategies, and business models. Big companies tend to reward Performers and discourage the unconventional ways of Producers. But it's the latter who integrate multiple ideas, perspectives, and actions, and who trust their insights enough to make game-changing bets. This book breaks down the five critical habits of mind of massive value-creators, so you can learn how to identify, encourage, and retain such individuals—and maybe even become one

yourself. The Self-made Billionaire Effect will forever change the way you think about talent and business value. In honor of The Self-Made Billionaire Effect purchases, PricewaterhouseCoopers LLP is making a significant contribution to DonorsChoose.org, an online charity that connects public school teachers in need of classroom materials and experiences with individual donors who want to help. PwC's gift will support financial literacy projects around the country. "One of the most challenging questions for Christian ecumenical theology is how the relationship

between the eucharistic bread and wine and Jesus Christ's body and blood can be appropriately described. This book takes a new approach to controverted questions of eucharistic presence by drawing on cognitive linguistics. Arguing that human cognition is grounded in sensorimotor experience and that phenomena such as metaphor and conceptual blending are basic building blocks of thought, the book proposes that inherited models of eucharistic presence are not necessarily mutually exclusive but can serve as complementary members of a shared ecumenical repertoire. The central element of this

repertoire is the motif of identity, grounded in the Synoptic and Pauline institution narratives. The book argues that the statement "The eucharistic bread and wine are the body and blood of Christ" can be understood both as figurative and as true in the proper sense, thus resolving a church-dividing dichotomy. The identity motif is complemented by four major non-scriptural motifs: representation, change, containment, and conduit. Each motif with its entailments is explored in depth and suggestions for ecumenical reconciliation in both doctrine and practices are offered. The book also provides an introduction to cognitive

linguistics and offers suggestions for further reading in that field"-- Value creation is a pivotal aspect of the modern business industry. By implementing these strategies into initiatives and processes, deeper alliances between customers and organizations can be established. The Handbook of Research on Strategic Alliances and Value Co-Creation in the Service Industry is a comprehensive source of scholarly material on frameworks for the effective management of value co-creation in contemporary business contexts. Highlighting relevant perspectives across a range of topics, such as public relations, service-dominant

logic, and consumer culture theory, this publication is ideally designed for professionals, researchers, graduate students, academics, and practitioners interested in emerging developments in the service industry. The new edition of this market-leading textbook provides a holistic introduction to the academic study of entrepreneurship and offers practical guidance for prospective entrepreneurs. Adopting a life-cycle view of a business from start-up to maturity, it explores the many stages and forms of entrepreneurship. With an international outlook and expert synthesis of both theoretical foundations and

lessons from real-life business practice, the book offers a complete course guide, fostering entrepreneurial talent, thinking and skills. The author's engaging style and unrivalled expertise drawn from a long-ranging career (as an academic, accountant and entrepreneur) make the book accessible and authoritative. This is an ideal textbook for those studying Entrepreneurship or Small Business on undergraduate business or management degree courses, as well as on MBA programmes. It will also appeal to those looking to launch their own businesses. New to this Edition: - Updated international case studies from

entrepreneurs and small businesses, ranging from Oman to Australia - First-hand, detailed stories from real-life entrepreneurs in brand new video interviews integrated throughout the text - Increased and integrated coverage of social and civic enterprise and hot topics such as effectuation and lean entrepreneurship Multiple sclerosis (MS) is a complex disease with a presumed autoimmune aetiology and few current effective treatments. Disease modifying therapies focus on the altering the natural course of relapsing and remitting MS, targeting the inflammatory response. Other targets involve tackling the cause of the

disease - demyelination of axons through remyelination therapies. Due to several recent breakthroughs in the understanding of the pathophysiology of MS new targets for remyelination and immunomodulation are rapidly emerging. This book provides a comprehensive overview of drug discovery and development for the molecular basis of the disease, from new targets to drugs currently in clinical development, cellular and animal disease models to biomarkers for diagnosis and assessment in clinical trials. Emerging Drugs and Targets for Multiple Sclerosis is an ideal reference for any student or researcher interested in

drug development for neurodegenerative diseases, autoimmune diseases and MS in particular. For the first time, Massimo Introvigne proposes a general social history of Satanism and anti-Satanism, from the French Court of Louis XIV to the Satanic scares of the late 20th century, satanic themes in Black Metal music, the Church of Satan, and beyond. Despite the fact that by the early twentieth century women missionaries began to outnumber male missionaries there is a dearth of publications dealing with their experiences, history and their contributions to the missionary movement. Rosemary Seton's book covers the period from

the early nineteenth century to the mid-twentieth century and examines the role of women missionaries in sub-Saharan Africa, South Asia, China, the Pacific, the Caribbean and in Madagascar. These fascinating yet untold stories are brought vividly to life using a variety of published and private sources, 'first-hand' impressions and accounts with quotations from diaries, letters and memoirs. Includes history of bills and resolutions. This book is the first comprehensive examination of the ethical parameters of paganism when considered as a world religion alongside Christianity, Islam, Judaism, Hinduism and Buddhism. The issues of evil,

value and idolatry from a pagan perspective are analyzed as part of the Western ethical tradition from the Sophists and Platonic schools through the philosophers Spinoza, Hume, Kant and Nietzsche to such contemporary thinkers as Grayling, Mackie, MacIntyre, Habermas, Levinas, Santayana, etc. From a more practical viewpoint, a delineation of applied pagan ethics is then presented in connection with current moral issues such as same-sex union, recreational drugs, environmental awareness, abortion and terrorism. Finally, overviews of sectarian pagan ethics (Shinto, Santeria, Heathenism, Druidry, Romuva, Slavic, Kemeticism,

Classical and Wicca) provide both the general and pagan reader with an understanding of the provocative range and differentiation of pagan ethical thought. The book approaches the Western ethical tradition as an historical development and a continuing dialogue. The novelty of this approach lies in its consideration of paganism as a legitimate voice of religious spirituality rather than a satanic aberration or ridiculous childish behavior. The book is aimed at both the contemporary Western pagan and anyone with an interest in the moral dilemmas of our times and the desire to engage in the global ethical discussion. Among the more important

features of the book are its presentation of a re-evaluation of idolatry, the notion of the virtue value, the richness of the pagan tradition, and the expansion of Western ethics beyond its Christian heritage. The Mosaic of Autoimmunity: The Novel Factors of Autoimmune Diseases describes the multifactorial origin and diversity of expression of autoimmune diseases in humans. The term implies that different combinations of factors in autoimmunity produce varying and unique clinical pictures in a wide spectrum of autoimmune diseases. Most of the factors involved in autoimmunity can be

categorized into four groups: genetic, immune defects, hormonal and environmental factors. In this book, the environmental factors are reviewed, including infectious agents, vaccines as triggers of autoimmunity, smoking and its relationship with rheumatoid arthritis, systemic lupus erythematosus, thyroid disease, multiple sclerosis and inflammatory bowel diseases. An entirely new syndrome, the autoimmune/inflammatory syndrome induced by adjuvants (ASIA), is also included, along with other diseases that are now recognized as having an autoimmune etiopathogenesis. Highlights the concept of the mosaic of autoimmune

manifestations Includes new visions on unsuspected molecules Provides updated knowledge to physicians helping patients with autoimmune diseases Presents thorough, up-to-date information on specific diseases, along with clinical applications Businesses in the Asia-Pacific communities provide enormous opportunities for local entrepreneurs to develop and collectively collaborate with other economies. However, several challenges and success factors exist for effective business operations in the region. Innovative Management and Business Practices in Asia is a collection

of innovative research that enhances understanding and collaboration in business, management, and technology in Asia for the present and in the future. While highlighting topics including corporate culture, international trade, and business administration, this book is ideally designed for managers, executives, CEOs, board members, corporate professionals, managing directors, deans, decision makers, professors, researchers, policymakers, industry practitioners, and students. Eight pages of color stills from the film • Sneak preview of Hollow City, the next novel in the series A mysterious island. An abandoned orphanage. A strange collection of very curious photographs. It all waits to be discovered in Miss Peregrine's Home for Peculiar Children, an unforgettable novel that mixes fiction and photography in a thrilling reading experience. As our story opens, a horrific family tragedy sets sixteen-year-old Jacob journeying to a remote island off the coast of Wales, where he discovers the crumbling ruins of Miss Peregrine's Home for Peculiar Children. As Jacob explores its abandoned bedrooms and

hallways, it becomes clear that the children were more than just peculiar. They may have been dangerous. They may have been quarantined on a deserted island for good reason. And somehow—impossible though it seems—they may still be alive. A spine-tingling fantasy illustrated with haunting vintage photography, Miss Peregrine's Home for Peculiar Children will delight adults, teens, and anyone who relishes an adventure in the shadows. "A tense, moving, and wondrously strange first novel. The photographs and text work together brilliantly to create an unforgettable story."—John Green, New York Times best-

selling author of *The Fault in Our Stars* "With its X-Men: First Class-meets-time-travel story line, David Lynchian imagery, and rich, eerie detail, it's no wonder Miss Peregrine's Home for Peculiar Children has been snapped up by Twentieth Century Fox. B+"—*Entertainment Weekly* "'Peculiar' doesn't even begin to cover it. Riggs' chilling, wondrous novel is already headed to the movies."—*People* "You'll love it if you want a good thriller for the summer. Easy-to-read, student-friendly coverage focuses on the direct application of theory to clinical laboratory practice, preparing you for the real world in which you will practice. The 4th Edition of this popular text has been completely updated and revised throughout to reflect the latest advances in the field. A brand-new full-color layout makes the content easier to understand than ever before. The SAGE Handbook of Small Business and Entrepreneurship offers state-of-the-art chapters on all aspects of this rapidly-

evolving discipline. Original contributions from the best international scholars map the development of Entrepreneurship as an academic field, explore its key current debates and research methods, and also consider its future directions. Part One: The People and the Entrepreneurial Processes Part Two: Entrepreneurship and Small Business Management and Organization Part Three: Entrepreneurial Milieu Part Four: Researching Small Business Entrepreneurship This handbook will be the leading reference book for Entrepreneurship academics and researchers, as well as those from other associated

disciplines including business and management, psychology, marketing, sociology and anthropology. Diagnosing asthma requires knowledge of the multiple conditions that emulate it, and treatment requires addressing factors that modify the disease. This comprehensive, single reference will help practitioners identify and care for co-morbid conditions and improve asthma treatment. The book details sources of thermal energy, methods of capture, and applications. It describes the basics of thermal energy, including measuring thermal energy, laws of thermodynamics that govern its use and transformation, modes

of thermal energy, conventional processes, devices and materials, and the methods by which it is transferred. It covers 8 sources of thermal energy: combustion, fusion (solar) fission (nuclear), geothermal, microwave, plasma, waste heat, and thermal energy storage. In each case, the methods of production and capture and its uses are described in detail. It also discusses novel processes and devices used to improve transfer and transformation processes. Programming has become a significant part of connecting theoretical development and scientific application computation. Computer programs and

processes that take into account the goals and needs of the user meet with the greatest success, so it behooves software engineers to consider the human element inherent in every line of code they write. Research Anthology on Recent Trends, Tools, and Implications of Computer Programming is a vital reference source that examines the latest scholarly material on trends, techniques, and uses of various programming applications and examines the benefits and challenges of these computational developments. Highlighting a range of topics such as coding standards, software engineering, and computer systems

development, this multi-volume book is ideally designed for programmers, computer scientists, software developers, analysts, security experts, IoT software programmers, computer and software engineers, students, professionals, and researchers. Are humans violent or peaceful by nature? We are both. In this ambitious and wide-ranging book, Agner Fog presents a ground-breaking new argument that explains the existence of differently organised societies using evolutionary theory. It combines natural sciences and social sciences in a way that is rarely seen. According to a concept called regality theory, people show a preference for

authoritarianism and strong leadership in times of war or collective danger, but desire egalitarian political systems in times of peace and safety. These individual impulses shape the way societies develop and organise themselves, and in this book Agner argues that there is an evolutionary mechanism behind this flexible psychology. Incorporating a wide range of ideas including evolutionary theory, game theory, and ecological theory, Agner analyses the conditions that make us either strident or docile. He tests this theory on data from contemporary and ancient societies, and provides a detailed explanation of the

applications of regality theory to issues of war and peace, the rise and fall of empires, the mass media, economic instability, ecological crisis, and much more. Warlike and Peaceful Societies: The Interaction of Genes and Culture draws on many different fields of both the social sciences and the natural sciences. It will be of interest to academics and students in these fields, including anthropology, political science, history, conflict and peace research, social psychology, and more, as well as the natural sciences, including human biology, human evolution, and ecology. "The Christian church worldwide has

been taken prisoner by Satan's counterfeit healing." This statement is based on the author's personal experience, modest exposure to the Toronto Blessing, observation of parachurch healing ministries, and extensive historical reconstructions. Satan's Counterfeit Healing presents and evaluates Satan's supernatural healing from the Paleolithic period (ca. 45000 BCE) to the contemporary church. The guiding thesis is that Satan and his demonic surrogates perform miracles which are evident as psi paranormal phenomena. These manifestations include physical and exorcistic supernatural healings. Paleolithic and

Neolithic periods produced Great Mother goddess worship and healing, which have persisted ever since. These idolatries, combined with OT nature gods, were a backdrop to Jesus' true miracles. For two thousand years of church history there's been a tug-of-war between true and false healing. Mother goddess as Mariological shrine healing joined with natural and demonic magic, and esoteric energy psi. Alongside these the Holy Spirit has raised up genuine healers and their ministries. Modern healing is marked by energy counterfeits and faith healing, the latter especially accompanied by trance, false prophecy, and psi

transformations. True divine healing can be recovered when Christians repudiate nature gods, reject false prophecy, and restore proper eschatology. As the world is currently in the midst of financial and economic crises, this collection of expert contributions focuses on strategy formation and implementation at various organizational levels to address the challenges ahead. The latest economic turmoil and its ongoing impact on business performance are compelling top managers to develop effective business strategies and redefine the boundaries of their operational and strategic activities. On one hand, tremendous challenges in the

competitive business environment have become a source of global threats for many small entrepreneurs. On the other, investors faced with today's volatile economic conditions demand more gains on their capital investments to counter-balance the growing risk of global threats. This book explores the question as to whether it is possible to efficiently and effectively address these threats and obstacles. Are managers capable of planning and implementing strategic actions? What should the major managerial strategy be in order to overcome fluctuations in a market-oriented society? The strategies and practices

recommended here are aimed to design continuous development competencies and contribute to the stability, recovery and sustainability of global business operations under volatile economic conditions. This refreshingly novel book seeks to establish managerial strategies and practices for effectively responding to challenges in the competitive business environment, as global volatility and fluctuations continue to worsen. Transplant medicine has progressed massively, but, due to insufficient social donation responses, waiting patient lists increase and the sad consequences of this reality persist indefinitely. This book

provides a thorough analysis of the problems presented by organ transplants and social behaviour. It interprets the evolution of transplantation, and its associated medical, ethical-legal, psychosocial and religious problems, as well as educational proposals that have accompanied this medical practice over time. It will serve to provide, at all societal levels, the possibility of a clear understanding of this serious health crisis.
